Viton power valves are offered for Holley carburetors used by Volvo Penta. These power valves are resistant to oxygenated fuel and the negative effects of old fuel.

The power valves are sold as kits. The available kits are shown in the chart. Use these power valve kits whenever servicing a Holley carburetor.

Fuel stabilizer is strongly recommended for off season or other extended storage. This protects all fuel system components from damage associated with fuel that has deteriorated during storage.

See Service Bulletin 23-0-2 for complete procedures on adding fuel stabilizer and preparation of the engine for storage.
