Volvo Penta has received numerous questions on how to fit a water heater to a 02-75. The procedures are addressed in the instruction manual, 7742977, on page 16. The following picture is a cut out from the instruction manual.

Note that the hose connections for hot water outlets are intended for a hose inner diameter of 16 mm (5/8").

02·75
Replace existing hose between Turbo and the Oil cooler outlet. Install calorifier as shown.
IN "To calorifer OUT".: From calorifer

NOTE! No valves or thermostats are allowed in the circuit as this may cause engine overheating.
