Volvo Penta discontinues the 220V onboard product range

Models: Accessories

Distribution: Parts Date: 04-2005 Binder: Parts Replaces:

The 220V onboard system was introduced already 1999, but unfortunately the sales volume has been developing very poor since then. In addition to that, our supplier is now renewing several of the main components, which has a major impact on the current range offered by Volvo Penta.

Incorporating these renewings into Volvo Penta product range, would mean a considerable in-house engineering effort, and in relation to the experienced attained revenues, it can not be justified.

Thus, all unique 220V onboard components are now subject for immediate deletion, and in practice this means that Volvo Penta can no longer supply any complete 220V onboard installation.
