All XDP transom shield kits (TSKs) have been replaced by kit 21485669. This kit contains a complete XHP transom shield, plus parts needed to convert the shield to other TSK specifications.

The TSK is equipped with the XHP exhaust bellows. If replacing other TSK models the bellows (included in the kit) must be changed on the new TSK.

If the current transom shield has limited trim, a trim cylinder spacer must be installed (included in the kit) in the new TSK.

Instructions for changing out the parts are included in the kit.

See Workshop Manual 7747250 or Installation Manual 7797384 for details on removing and installing the TSK.
