Pistons for MD2B, AQD2B, MD3B, MD11C, AQD11C, MD17C

In order to increase the exhaust temperature at low partial/oad we have earlier introduced pistons for higher compression ratio.

Please notice that when changing pistons or complete cylinder (875513) in above engines you must control that the engine has the same type of pistons in all the cylinder barrels.

The new type of pistons, for compression ratio 17.5:1 are stamped on the top, for standard dimension: 48/8 and for 0,030" over size: 27/16.

Volvo Penta Service Bulletins are provided to the public for reference purposes only. Please consult a certified Volvo Penta mechanic before attempting any repairs.
