Printed parts catalog subscription stopped - US

Models: Gas engines

Starting in 2009 printed catalogs for gas engines are not part of the literature subscription. This change was made to reduce costs at the dealers and to improve the quality of the parts information.

Electronic Parts Catalogs (EPCII) are available on Partner Network or offline from a DVD. The information on EPCis constantly updated and thus is more accurate than printed versions. Volvo Penta strongly recommends the use of EPCover the printed catalogs.

If paper catalogs are desired, they can be ordered through the regular parts order routine.
