

Mercruiser

I have a blown piston and need the piston and rings. I had a look at the engine catalouge and have seen three different serial nos. for my pistons. As follows:

795-882692 - Piston Grade A

795-882693 - Piston Grade B

795-882694 - Piston Grade C

Can you please guide me on how I can recognise which Piston I need to order? The serial no. of my engine is 88109605.

I tried to look on the blown piston, yet the only number I have seen is as follows:

3772B (which has nothing to do with the part numbers I found in the cataloge above.

[You will need the manual](#) 90-863016001 (\$105) to figure out which piston you need.

You might see if you can find the manual on the web, but if you can't let me know and I can order it in for you.

Unique solution ID: #1230
