

# Perkins

## **I am looking to replace the Hurth transmission as it is slipping but cannot see how to identify the model number, can you help?**

Perkins 4.108 usually came with the HBW 50 or HBW100 or the HBW 150. If the tag is gone can you send me a couple of pictures of the tranny?

Ocasionaly they came with Borg Warner gears, but with a picture I should be able to ID it.

Can you also give me the serial number and build list of the engine. It should be two letters (like ED), four or five number, a single space or a B or

a J, and then followed with five numbers.

Unique solution ID: #1231
