

Velvet Drive

I would like to know where & how the Sending Temperature Alarm for my Velvet Drive 5000 Model No. 20-01-004, ratio 2.040: Serial NO. 6410 is displayed.

Crusader **R020037** Switch High Temperature Alarm, 235-F. High Temp Alarm Switch, screws into top of Transmission, so it just connects to the alarm buzzer.

If you wanted to put in an actual temp sensor you could, but it would take a different sensor and would require a separate

temp gauge. Most times when people do this they use aftermarket parts (like by Teleflex).

Unique solution ID: #1215
