

Volvo Penta

What are the part numbers for installing a ZF damper plate?

Hello:

The dampers (old part number changes to 3582751 which requires new bolts 959227 and 994893 for washers), front seals for the ZF63A (input seals) and the rear KAMD300 engine seals. The ZF damper plate number is 3312316004. This plate should be the same as the Volvo Penta 3582751 coupler (you will still need the new bolts and washers) on them.

Thank you and please don't hesitate to contact us if you need any more information or would like to place an order.
