Volvo Penta

I need a way to fit a 1994 Volvo Penta version 7.4 manifold to a Volvo Penta 740B(A). Are there kits for this?

 Here is the work around to replace the manifold and two piece riser from your
Volvo Penta 740B(A) to the 1994 Volvo Penta version 7.4 manifold and one piece
riser.   You will
have to fuss with this a bit to get everything to fit.

3861459 MANIFOLD (Replaces 3852362) 3
3852472 GASKET
3863061 EXHAUST PIPE KIT
3850740 PLUG
3863191 KIT (2 RISER GASK.)
3852476 CAP
3852742 HOSE
3852696 HOSE
3852597 HOSE
3850211 EXHAUST PIPE

A couple of notes:

1) On the "Y" pipe you can either purchase a new "Y" pipe that is lower (part
number 385100
for $1,100) or you can cut off the top of your old "Y" pipe.

2) You will have to change the cooling pipes a bit as the old system had a dual hose
system
going into the manifold, while the 1994 7.4 does not. In the quote I included the
hoses that
you will have to use to replace the fixed coolant pipes.   You may have to go to
NAPA (VIP)
to get hose adapters.   The schematic for the 1994 (MD) 7.4 that I sent you shows
the new
cooling system. I also so sent your old original set up so you can compare the two
systems.

3) In the quote, I included the rubber bellows.   The lower bellows usually can be
used
while the upper bellows are a bit short.   Most times you have to use a manifold
exhaust hose
instead of the bellows on the upper bellows.

4) The small 90 degree elbow from the 1994 is NLA so I quoted you the 1995 90
degree
elbow 885127 which will work.

5) And finally while we have done this before successfully this is not a Volvo Penta
blessed

Volvo Penta

work around so there is no implied guarantee from Volvo Penta or from Marine Parts Express.
