

Volvo Penta

"Part Found" Question

volvo MD2040B

Hello,

Is there a way to tell on your website if parts are in stock?

When it says "part found" does it mean it is in stock or just that the part number is valid?

Regards

Hello:

It can mean both.

We have a large stock that is constantly changing due to our volume. So most times if it says part found it means that it is in stock and we have it.

But sometimes our stock is depleted before the web site gets updated so sometimes we don't actually have it in stock. It usually takes about two days for us to restock.

However, MD2040B engines are discontinued through Volvo Penta and Volvo Penta is a little slack in supplying parts for some discontinued engines especially for engines like yours that are built upon a Perkins block.

So if you let me know what you need, I can send you a quote along with any leadtimes.

We are also able to drop ship directly from Volvo Penta so if you are in a hurry we can drop it directly to you.
