

Overhaul Kit

Can you order overhaul kits for my TAMMD41A and TAMMD41B?

I quoted you OEM directly from Volvo Penta one for the A and one for the B. When we do this, we almost always rebuild the A into a B. You reduce the smoke substantially and the engine runs smoother. You do need to change the fuel injection pump settings and the injector tips (around \$950 or so do both), but it is very much worth it.

There are a couple of companies offering aftermarket versions for the TAMMD41P-A but not for the A and B versions. We have not had much luck with the aftermarket version as they are pretty cheap.
